DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over the combination of Lee et al. (6,391,768) and Nagahara et al. (6,531,397).

Lee et al. disclose providing a substrate (2) and depositing thereon a layer of silicon oxynitride (40); using a slurry to remove said layer of silicon oxynitride, thereby forming a fresh surface (Col. 6, lines 40-57); washing any remaining slurry; and subjecting said fresh surface to a high pressure rinse by a solution that comprises a surfactant that modifies hydrophobic behavior, thereby removing from said fresh surface any and all residual particles of silicon oxynitride (Col. 6, lines 50-57).

Lee et al. do not disclose mounting said substrate on a platen and, using a polishing pad.

Nagahara et al. disclose a CMP process introducing a slurry dropwise onto a polishing pad of a rotating table (platen).

It would have been within the scope of one of ordinary skill in the art to combine the teachings of Lee et al. and Nagahara et al. achieve the silicon oxynitride removing step.

Art Unit: 2823

Choice of a particular pH, surfactant, surfactant concentration and rinse pressure would have been a matter of routine optimization. In addition, the selection of particular pH surfactant, surfactant concentration and rinse pressure, its obvious because it is a matter of determining optimum process conditions by routine experimentation with a limited number of species of result effective variables. These claims are prima facie obvious without showing that the claimed ranges achieve unexpected results relative to the prior art range. In re Woodruff, 16 USPQ2d 1935, 1937 (Fed. Cir. 1990). See also In re Huang, 40 USPQ2d 1685, 1688 (Fed. Cir. 1996)(claimed ranges of a result effective variable, which do not overlap the prior art ranges, are unpatentable unless they produce a new and unexpected result which is different in kind and not merely in degree from the results of the prior art). See also In re Boesch, 205 USPQ 215 (CCPA) (discovery of optimum value of result effective variable in known process is ordinarily within skill or art) and In re Aller, 105 USPQ 233 (CCPA 1995) (selection of optimum ranges within prior art general conditions is obvious).
